

Active Ingredient: Fipronil 0.1g/kg in the form of a pale green paste bait

Warning: This substance may be harmful if swallowed, or the dry dust inhaled.

Precautions: Keep out of reach of children. Wear rubber gloves when applying the product. Use immediately or store in a sealed container in a cool place out of direct sunlight or within a refrigerator in original container, separate from food or feed. Once open use contents immediately.

Container Disposal: Only dispose of contents in treatment areas. Crush and dispose of empty container by incineration, in an approved landfill or mixed with sufficient inert material to dilute any residue to a negligible level.

First Aid: If swallowed observe patient for signs of nervousness, excitability or agitation. Seek medical advice if these symptoms noted. There should not be any ill-effects from skin contamination. Thoroughly wash skin with soap and water. Remove and wash any contaminated clothing. If in eyes irrigate with plenty of water. If any irritation persists seek medical advice. For human emergency phone: National Poison Centre **0800 764 766**

Directions for Use: Remove cartridge from vac bag. Cut tip from bait cartridge and place in the dispensing unit. Squeeze small amounts of bait at regular intervals of 1.5-2.5 m into cracks, crevices and shady places where Argentine ants are seen. Bait will take a few days to be effective. Repeat after 12 months or as necessary if ants re-invade the treated areas. Maximum application equivalent to 3 kg /ha.
