

FARM PONDS & LAKES BIOLOGICAL TREATMENT

PONDPERFECT COMBO keeps all large ponds and lakes healthy and balanced. This all-natural product is chemical-free, non-toxic, odourless and completely safe. This commercial strength solution is the preferred biological treatment of knowledgeable professionals to increase and restore balance and bioactivity in ponds and lakes, safely and effectively improving overall health, clarifying water, digesting sludge, eliminating toxic algae and quickly reducing foul odours.

The 2-part ComboPack includes 4 litres of PondPerfect, super-concentrated liquid bacteria for fast action, plus one slow-release powder-based biodegradable EcoSock for long-lasting protection.

TYPICAL APPLICATIONS

- FARM PONDS & LAKES
- STOCK PONDS
- IRRIGATION DAMS / RESERVOIRS

FEATURES & BENEFITS

- IMPROVES & MAINTAINS WATER QUALITY & CLARITY
- CONTROLS TOXIC ALGAE
- DIGESTS ORGANIC SLUDGE (leaves, dead algae, fish waste, etc.)
- ELIMINATES FOUL ODOURS
- 100% natural - not a chemical / Non-toxic & non-pathogenic
- Completely safe for people, livestock, pets, fish, wildlife & plants
- Easy to apply, with rapid results

DIRECTIONS FOR USE: PondPerfect provides maximum instant action, while the EcoSock works throughout the month to maintain the required level of bioactivity. Apply most of the PondPerfect to areas of the pond or lake where algae and/or sludge problems exist and around aquatic plants. Apply EcoSock towards the centre of the pond/lake. If using multiple EcoSocks place strategically.

STANDARD DOSE RATE: Dose 1 x PondPerfect-4L and 1 x EcoSock at the same time, once a month or as necessary. When seeking to eliminate an existing algae problem, the PondPerfect Combo dose rate is doubled until the problem is resolved, and then the dose is returned to the standard rate. The double dose rate is usually required for about 4 weeks. In some cases, switching to a double dose rate is effective for dealing with short-term algae blooms that occur during unusually hot or sunny periods.

Installing one of our **AIRMAX® Aeration Systems** in your pond or lake will further enhance and speed up the sludge digestion process and prevent anaerobic conditions from developing.
